

INTELLIGENT VEHICLE DAMAGE ASSESSMENT AND COST ESTIMATION FOR INSURANCE COMPANIES

A PROJECT REPORT

Submitted by
TEAM ID : PNT2022TMID25396

KINGS ENGINEERING COLLEGE
CHENNAI 602117

ABSTRACT

Nowadays, the proliferation of automobile industries is directly related to the number of claims in insurance companies. Those companies are facing many simultaneous claims and solving claims leakage. The project can be extended to green houses where

manual supervision is far and few in between. In Advanced Artificial Intelligence (AI), machine learning and deep learning algorithms can help to solve these kinds of problems for insurance industries. we apply deep learning based algorithms, VGG16 and VGG19, for car damage detection and assessment in real world datasets. The algorithms detect the damaged part of a car, assess its location and severity .After analyzing and implementing our models, we can find out that the results of using transfer learning and regularization can work better than those of fine-tuning. Then we apply transfer learning in pre-trained VGG models and use some techniques to improve the accuracy of our system.

PROJECT REPORT

1. INTRODUCTION

1.1 PROJECT OVERVIEW

Nowadays, the proliferation of automobile industries is directly related to the number of claims in insurance companies. Those companies are facing many simultaneous claims and solving claims leakage The project can be extended to green houses where manual supervision is far and few in between.

In Advanced Artificial Intelligence (AI), machine learning and deep learning algorithms can help to solve these kinds of problems for insurance industries

1.2 PURPOSE

Auto-detection of vehicle damage using photos taken at the scene of an accident can be very useful as it can drastically reduce the cost of processing insurance claims, as well as provide greater convenience to vehicle users.

2. LITERATURE SURVEY

2.1 EXISTING PROBLEM

In proposed system firstly, it collects the pictures of one's damaged automobile, later use these pictures to feed into our ML model that makes use of image processing to identify the details of the image, using Image processing it analyses the percentage of damage of the automobile. Next, it segregates the pictures based on 2 factors which are replace and repair.

2.3 PROBLEM STATEMENT DEFINITION

Mr. Venkataramanan is a 50 years old man. He had a own Car(Duster) and he worked at basic salary for past 30 Years , In this 30 Years he Faced a problem in Choosing Car Damage and Insurance claim.

- Venkataramanan wants to know the better recommendation for insurance claiming.
- He has faced huge losses for a long time.
- This problem is usually faced by lot of Customers.
- Mr. Venkataramanan needs to know the result immediately for Insurance claim.

3. IDEATION & PROPOSED SOLUTION

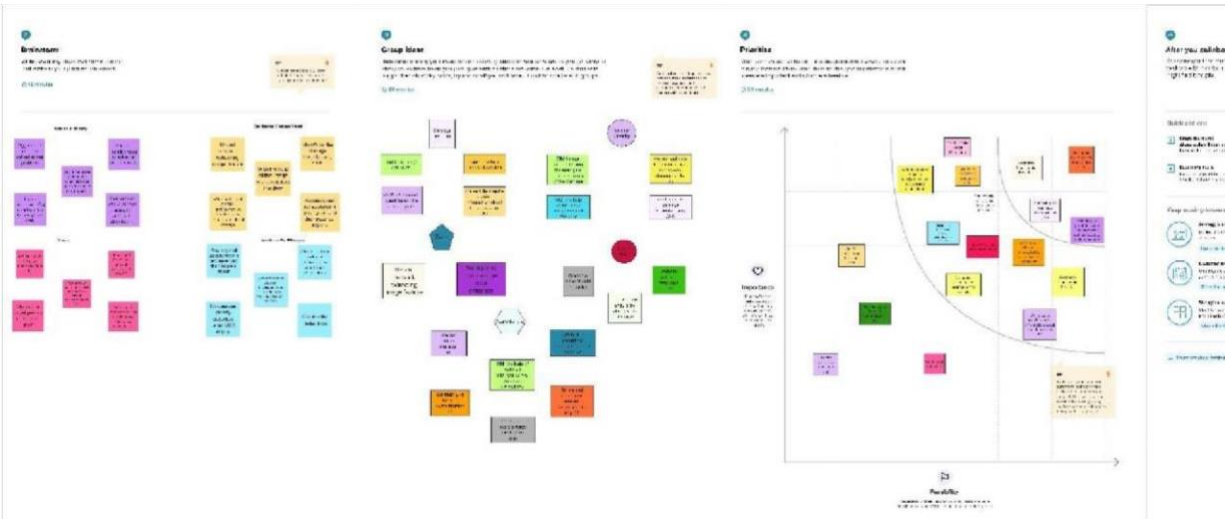

3.1 EMPATHY MAP CANVAS

3.2 IDEATION & BRAINSTORMING

3.3 PROPOSED SOLUTION

Project team shall fill the following information in proposed solution template

S.No	Parameter	Description
------	-----------	-------------

1	Problem Statement (Problem to be solved)	<p>Nowadays lot of money is being wasted in the car insurance business due to leakage claims. Claims leakage Underwriting leakage is characterized as the discrepancy between the actual payment of claims made and the sum that should have been paid if all of the industry's leading practices were applied. Visual examination and testing have been used to may these results.</p> <p>However, they impose delays in the processing of claims. There is no easy way of accessing and knowing about the part of the vehicle getting damaged. Often the processing of such a damaged part of the vehicle carrying the area of damaged part is cumbersome. New methods have to be proposed in order to make it faster and efficient. Processing of Insurance for the cars needs to be assessed in a quicker way so that claims can be provided to the damaged parts.</p>
2	Idea / Solution description	<p>Automobile Industry is one of the major industry in a Country. This proposed system is Intelligent vehicle damage assessment and cost estimator for insurance companies using computer vision in artificial intelligence. The model will predict the location of the damage as in front, side or rear, and the severity of such a damage as in minor, moderate or severe and estimate the cost of damage of both car and bike.</p>
3	Novelty / Uniqueness	<p>Deep learning method used to fixed the problem and then Working on with VGG16 pre[1]trained model by adding extra layers to increase the accuracy while implementing the project.</p>

4	Social Impact / Customer Satisfaction	The model developed will be used to fix the damage caused to the Vehicle quickly so that the vehicle can be modified to the old look and also for faster processing of cost of the damage to claim insurance quickly. This project can be used to save time for calculating the area and level of the damage quickly such that the insurance claim can be made efficiently.
5	Business Model (Revenue Model)	<p>This can also be used to help car companies as well.</p> <ul style="list-style-type: none"> ·Can collaborate with insurance companies. ·Can collaborate with car companies
6	Scalability of the Solution	AI guided Application provides 24/7 service to clear all customer queries and guide them through all the processes. In future, it can be scaled as per the requirements of the insurance or car company to include answers to queries related to the cost based on the inputs provided

3.4 PROBLEM SOLUTION FIT

Project Title: Intelligent Vehicle Damage Assessment & Cost Estimator for Insurance Companies		Project design Phase - 1		Team ID: PNT2022TMID15018	
Define CS, go into CC	1. CUSTOMER SEGMENT{ <ul style="list-style-type: none"> Common people Car companies Insurance companies Vehicle owner 	6. CUSTOMER CONSTRAINTS Trust Problem : The insurance companies Give the fake information about the estimation cost modify damage part of ensuring profit of company from user Anxiety : Customer concern is the level of severity of the damaged parts and fixing the extent of the damaged parts is also the customer concern.	5. AVAILABLE SOLUTIONS By gathering information about the damage assessment from customer side and vehicle companies to understand the level of damage and cost needed to same Searching the through the internet such as online website get the insight about the damage	Explore AS, differentiate	Focus on I&F, map into BC, understand TR
	2. JOBS-TO-BE-DONE /a PROBLEMS <ul style="list-style-type: none"> Analyze the damage part and giving good cost estimation for customer satisfy and support system Provide the good prediction system to predict the level of damage and modify the damage parts 	9. PROBLEM ROOT CAUSE <ul style="list-style-type: none"> Unaware about the level of damage Proper information about the estimation cost Not proper maintenance and accident Something etc..... 	7. BEHAVIOUR The user does not know or is unaware how to deal with the damage part of vehicle Inefficient to predict the level of damage and analysis to estimate the cost the damaged part this is The behavior		
Focus on AS, map into BC, understand BC	3. TRIGGERS <ul style="list-style-type: none"> Seeking help to identify the level of the damaged part. To help people with good prediction and analysis of level and cost for the damaged part of the vehicle. 	10. YOUR SOLUTION <ul style="list-style-type: none"> Collecting damaged parts of vehicles and preprocessing them to identify the severity and the location of damage. Users will be able to identify the level of damage by the prediction system. Using VGG16 Model to train the damaged parts and trying to estimate the cost for the same. 	8. CHANNELS of BEHAVIOR <ul style="list-style-type: none"> ONLINE <ul style="list-style-type: none"> Online Websites Social Media Platforms OFFLINE <ul style="list-style-type: none"> Customer throw Words Anxiety and Unawareness 	Identify strong TR & EM	
	4. EMOTIONS: BEFORE / AFTER <ul style="list-style-type: none"> Before: Lack of proper knowledge ,Improper maintenance, Unawareness about the level of damage and difficulty in estimating the cost for damages. After: Good knowledge about the Vehicle parts, Efficient prediction system giving the level of damage and analyzing cost for the same. 				

4. REQUIREMENT ANALYSIS

4.1 FUNCTIONAL REQUIREMENT

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	User Interface	User friendly and simple website
FR-4	Collect the datasets	Collect the data from the user side and their vehicle side information. Collect the data from about Insurance companies plans.
FR-5	Final Results	Model should be trained with high accuracy. Results obtained from the model should be displayed to The user with easy interpretability.

NON-FUNCTIONAL REQUIREMENTS

Following are the non-functional requirements of the proposed solution

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Intelligent model used to assessment the damage in the vehicle and estimate the cost to be provided by the insurance company.
NFR-2	Security	The credibility of the user and the confidentiality of user details about their vehicle must be maintained.
NFR-3	Reliability	This scheme can achieve good accuracy in damage estimation and cost estimation, thus providing accurate and unbiased insurance coverage to the user.
NFR-4	Performance	Real-time images are to be captured and uploaded to the website, where the proposed model performs damage assessment and gives the insurance cost accordingly.
NFR-5	Availability	The website should be compatible with web browsers on both mobile phones and computers.
NFR-6	Scalability	The proposed solution will be scalable in the future due to efficient and rapid analysis and accurate cost estimation

5. PROJECT DESIGN

5.1 DATA FLOW DIAGRAMS

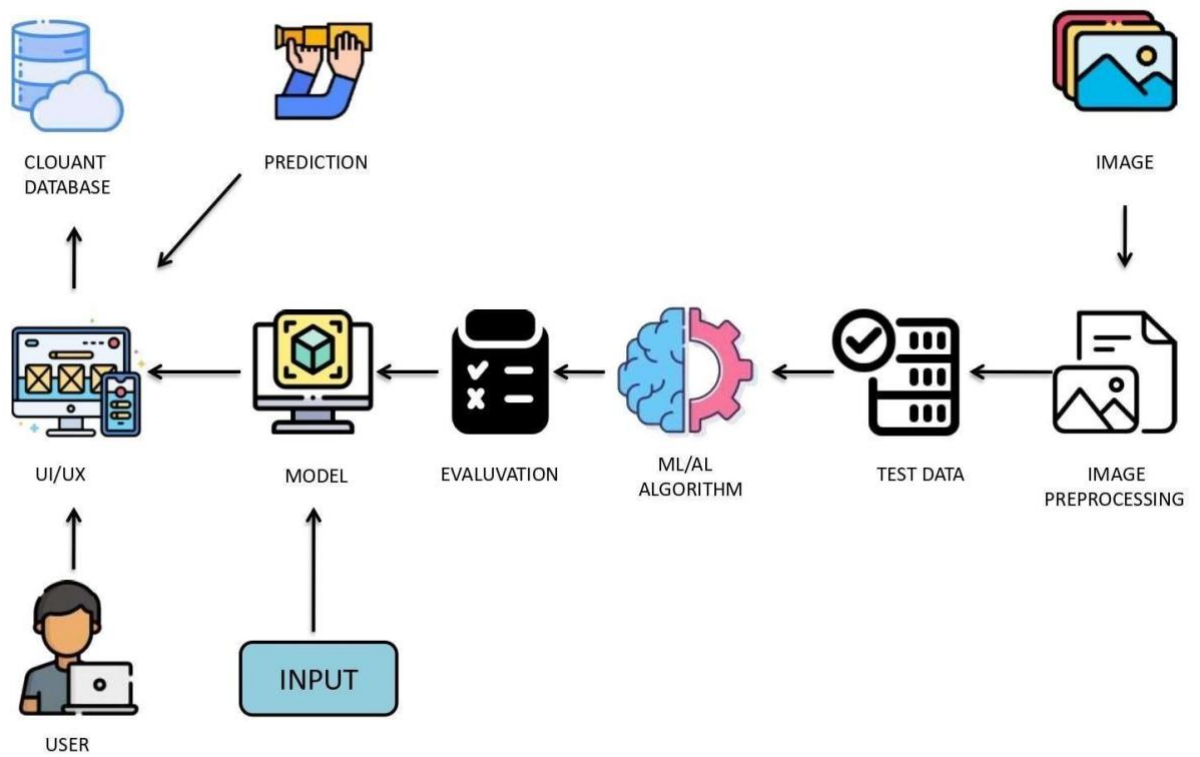

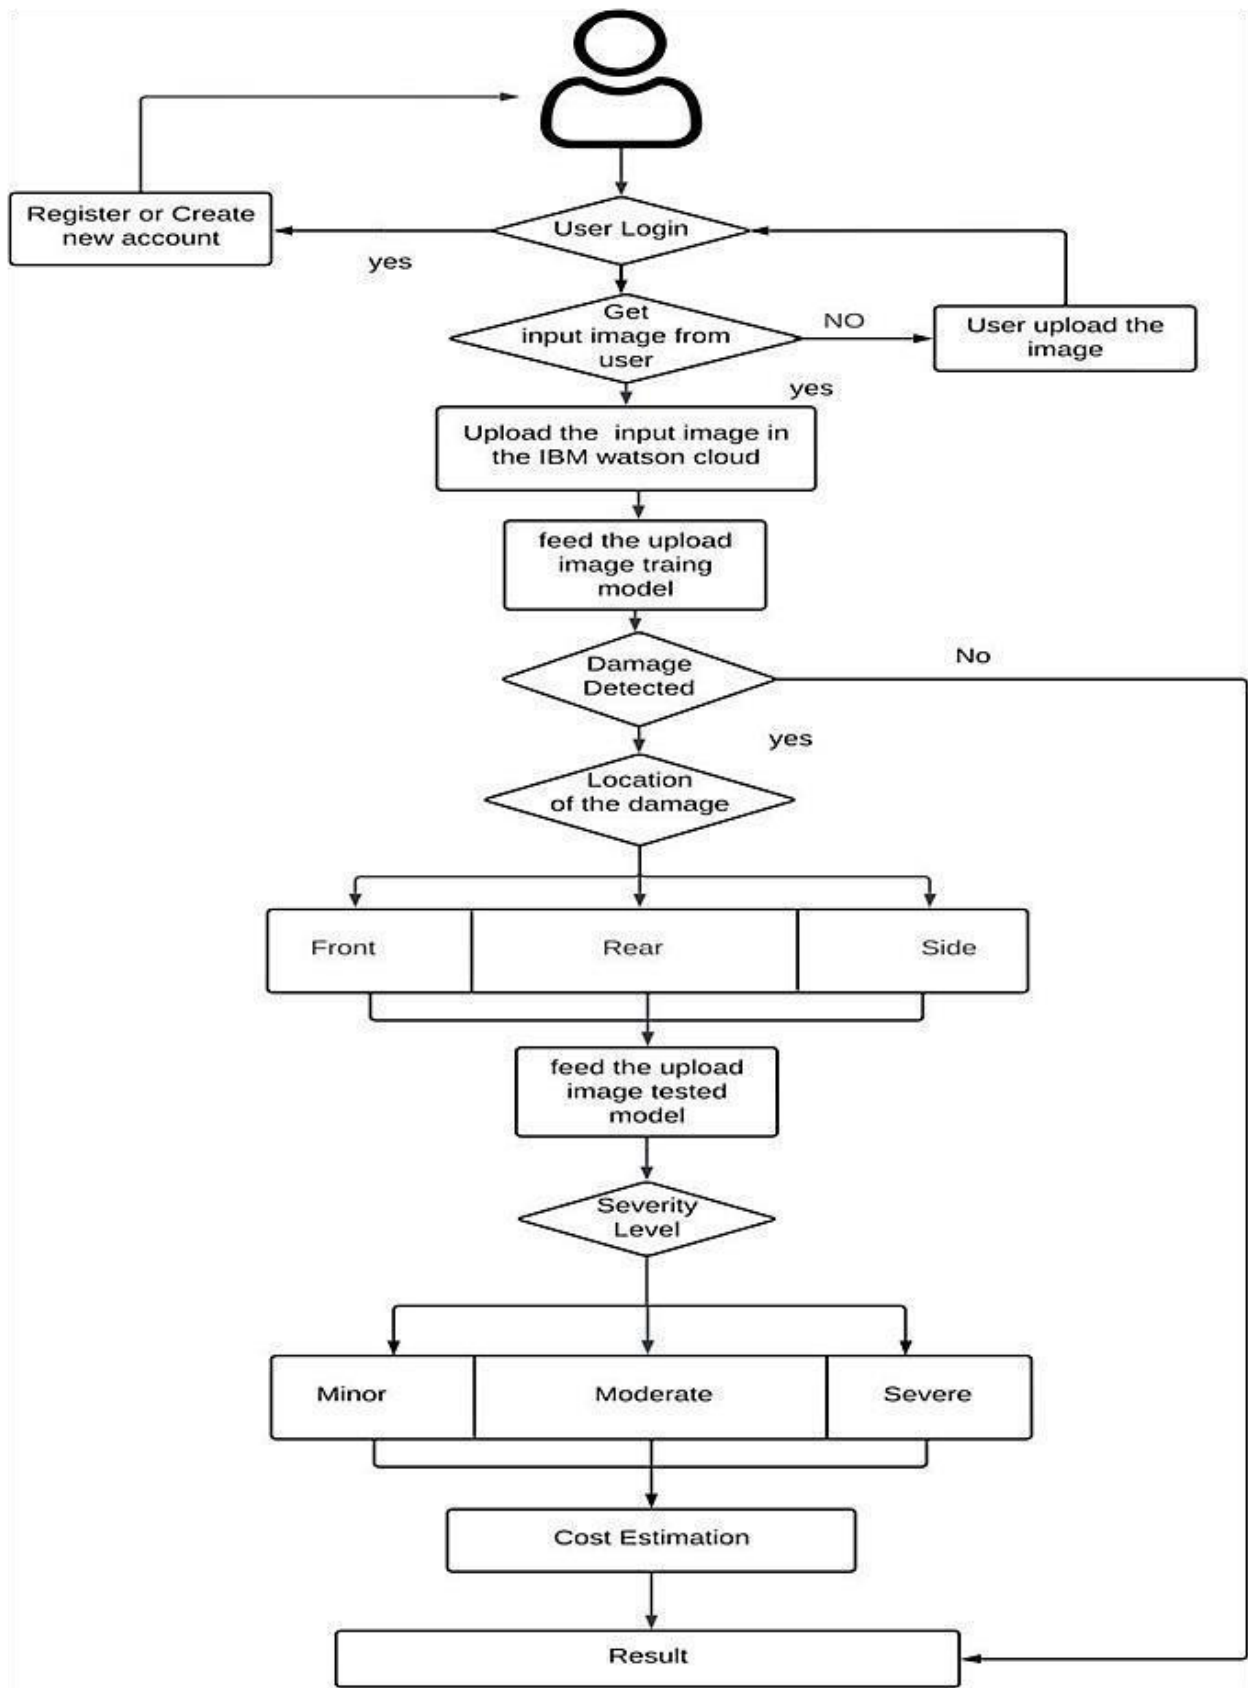

Figure 5.1.1 Data flow diagram

5.2 SOLUTION & TECHNICAL ARCHITECTURE Technical Architecture

Figure 5.2.1 Technical Architecture

Table-1 : Components & Technologies

S.No	Component	Description	Technology
1	User Interface	The user interacts with the web application	HTML, CSS, Python
2	Application Logic-1	Gets the user input image	Python
3	Application Logic-2	Obtaining model output for damage prediction	IBM Watson , Python
4	Application Logic-3	Obtaining model output for cost estimation	IBM Watson , Python

5	Database	Data Type – Details of images and user inputs is stored	MySQL, Js, IBM DB2
6	Cloud Database	A database service in the cloud	IBM DB2, IBM Cloud ant etc.
7	File Storage	User details and user input received The images of the vehicle are stored in the cloud	IBM Block Storage or Other Storage Service or Local File system
8	Machine Learning Model	The purpose of the AI model is to estimate cost of the damaged vehicle.	The purpose of the AI model is to estimate cost of the damaged vehicle.
9	Infrastructure (Server / Cloud)	Let's use the AI model on the cloud server Using Flask on a Web Page	Local, Cloud Foundry, Kubernetes, Python Flask etc.

Table-2: Application Characteristics

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	IBM Watson Opensource frameworks are used	Open source architecture technology IBM Watson

2.	Security Implementations	IBM Cloud	Certified WatsonAssistant Encrypted file systems are encrypted. Storage systems, key management systems.
3.	Scalable Architecture	Web Server - Static and dynamic website content Existing on the website will be updated accordingly User requests and suggestions Application Server Basic Upgrade Integrating website functionality and updates The logic in the website can be done Database Server – Based on varying inputs The user supplied database will be modified continuously	IBM Watson Assistant, Python, MySQL
4.	Availability	The AI misleadingly available to users anytime	IBM WatsonCloud assistance
5.	Performance	IBM Watson- Automated processes, deep learning model is trained using IBM Watson Studio For better performance and faster access.	IBM WatsonAssistant

5.3 USER STORIES

Use the below template to list all the user stories for the product.

UserType	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release

Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard by entering valid credentials	High	Sprint- 1
------------------------	--------------	-------	---	---	------	-----------

Customer Details	Login	USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email& click confirm	High	Sprint1
Customer Uses	Dashboard	USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint4
Customer Options	Details about insurance companies	USN-4	As a user, I can register for the application through Gmail	I can register & access the dashboard with Facebook Gmail	Medium	Sprint1
Customer usage	Login	USN-5	As a user, I can log into the application by entering email &password	I can log in and view my dashboard at my demand on any time	High	Sprint- 1
Customer needs to do	Dashboard	USN-6	As a user I must capture images of my vehicle and upload it into the web portal	I can capture the entire vehicle and upload	High	Sprint- 2
Customer (Web user)	Details about estimated cost based on damage	USN-7	As a user I must receive a detailed report of the damages present in the vehicle and the cost estimated	I can get the estimated insurance cost	High	Sprint- 3

Customer Care Executive	Details about Estimated cost Based on damage	USN-8	As a user, I need to get support from developers in case of queries and failure of service provided	I can have smooth user experiences and all the issues raised is sorted	Medium	Sprint- 4
Administrator	Details about Estimated cost Based on damage	USN-9	We need to satisfy the customer needs in an efficient way and make sure any sort of errors are fixed	I can finish the work without any problems	High	Sprint- 4

6. PROJECT PLANNING & SCHEDULING

Title	Description	Date
Literature Survey and Information Gathering	Gathering Information by referring the technical papers, research publications etc	10 October 2022
Prepare Empathy Map	To capture user pain and gains Prepare List of Problem Statement	10 October 2022
Ideation	Prioritize a top 3 ideas based on feasibility and Importance	10 October 2022
Proposed Solution	Solution include novelty, feasibility, business model, social impact and scalability of Solution	10 October r 2022
Problem Solution Fit	Solution fit document	11 October 2022

Solution Architecture	Solution Architecture	11 October 2022
Customer Journey	To Understand UserInteractions and experiences with application	18 October 2022
Functional Requirement	Prepare functional Requirement	18 October 2022
Data flow Diagrams	Data flow diagram	18 October 2022
Technology stack	Technology Architecture Diagram	18 October 2022
Milestone & sprint delivery plan	Activity what we done &further plans	3 November 2022
Project Development-Delivery of sprint1,2,3&4	Develop and submit the developed code by testing It	3 November 2022 – 19November 2022

6.1 SPRINT PLANNING & ESTIMATION Product Backlog,Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	UserStory / Task	Story Points	Priority	TeamMembers
---------------	--------------------------------------	--------------------------	-------------------------	---------------------	-----------------	--------------------

Sprint-1	Registration	USN-1	As a user ,I can resister for the applica on by entering my email,password, and confirming my password.	2	High	Sukumar Reddy
Sprint-1	Registration	USN-2	As a user, I will receive confirmation email once I haveRegistered for the Application	1	High	Sukumar Reddy
Sprint-1	Registration	USN-3	As a user ,I can register for the application Gmail.	2	Low	Sukumar Reddy
Sprint-1	Login	USN-4	As a user ,I can Login to the application by entering email &password .	1	Medium	Chetan Vivek
			As a user ,I can view all the plans and methods in			
Sprint-2	Dashboard	USN-5	the Dashboard.	1	High	Bhargav
Sprint-3	Storage	USN-1	As a user, I can Register for clammy insurance.	2	High	Chetan Vivek
Sprint-3		USN-2	As a us er, I can make a call to support line to get help with a product or service	2	High	Vivek

Sprint-4		USN-3	As a user, I can claim my insurance After getting from the administrator.	1	Medium	Bhargav
----------	--	-------	---	---	--------	---------

6.2 SPRINT DELIVERY SCHEDULE Project Tracker, Velocity & Burndown Chart

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	3 Days	3 Nov 2022	6 Nov 2022	20	
Sprint-2	20	3 Days	6 Nov 2022	9 Nov 2022		
Sprint-3	20	3 Days	9 Nov 2022	12 Nov 2022		
Sprint-4	20	3 Days	12 Nov 2022	15 Nov 2022		

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint).

Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

Burn down Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time

8.2 USER ACCEPTANCE TESTING

Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Sub total
By Design	10	4	2	3	20
Duplicate	1	0	3	0	4
External	2	3	0	1	6
Fixed	11	2	4	20	37
Not Reproduced	0	0	1	0	1
Skipped	0	0	1	1	2
Won't Fix	0	5	2	1	8
Totals	0	14	13	26	77

Test Case Analysis

This report shows the number of test cases passed, failed, and untested.

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	7	0	0	7
Client Application	51	0	0	51
Security	2	0	0	2
Outsource Shipping	3	0	0	3

Exception Reporting	9	0	0	9
Final Report Output	4	0	0	4
Version Control	2	0	0	2

9. RESULTS

9.1 PERFORMANCE METRICS

User will upload a car image or images and number plate of car, and we extract car registration number in text form using Googles Tesseract OCR. The performance metrics is

S.NO	Performances of damage detection			Performances of damage location			Performance of damage severity		
Pretrained VGG models	Precision	Recall	F1score	Precision	Recall	F1score	Precision	Recall	F1score
VGG16	0.94	0.94	0.94	0.71	0.69	0.69	0.61	0.55	0.53
VGG19	0.91	0.91	0.91	0.69	0.66	0.66	0.59	0.54	0.51

10. ADVANTAGES & DISADVANTAGES

ADVANTAGES:

- ✓ The advancement of image analysis and pattern recognition technologies, the auto insurance industry could significantly benefit.

- ✓ Our proposed system is that it was user friendly and highly efficient.
- ✓ The proposed system maintain privacy and also Working accuracy.
- ✓ It saves user time and energy.

DISADVANTAGES:

- The Major Drawback Of The Proposed Model Is That It Only Identifies The Physical Visible Damage And Not Of The Internal Or The Interior Damage.

11. CONCLUSION

- ◆ In this work of Damage analysis of a vehicle in general and insurance reclaim, a system has been designed using CNN and image classification which takes the input from a user as an image to test the severity of damage, which happens in a sequence of two steps.
- ◆ First being the image classification, here the input provided by the user is processed by the neural network to identify the car that is if the car is damaged or not.

12. FUTURE SCOPE

- ◆ This further research is implementing the proposed algorithm with the existing public datasets.
- Also, various segmentation algorithms can be implemented to improve accuracy.
- ◆
 - ◆ A higher quality dataset which includes pivotal parameters like location information and repair costs, the research could go a step further in predicting the cost of damage repair based on the image.
